Lenel® OnGuard®

Access Control Solutions

- **OnGuard Extended Enterprise™**
Advanced, distributed multi-regional, integrated security management system (U.S. Pat. 6,233,588)
- **OnGuard Enterprise™**
Advanced, single-region, integrated security management system (U.S. Pat. 6,738,772)
- **OnGuard Mobile Enterprise™**
Wireless security management system

Identity Management Solutions

- **OnGuard ID CredentialCenter™**
ID credential, PKI, smart card and biometrics management system

Video Management Solutions

- **OnGuard VideoManager™**
Seamlessly integrated, IP-based digital video management system
- **OnGuard GO!™**
Access control, ID management, and digital video recording, integrated on a single unit

Open Architecture Integration Services

- **OnGuard OpenIT™**
IT integration service
- **OnGuard DataExchange™**
Advanced data import/export service
- **OnGuard SNMP™**
Network management integration service
- **OnGuard OPC™**
Process control & building automation integration service
- **OnGuard Visitor™**
Visitor management system

LENEL®

Always OnGuard™

Only Lenel offers comprehensive solutions to provide maximum facility security and continuous employee/visitor tracking and identification!

Ministries of Defense/Military Facilities

Many governments rely on Lenel's leading-edge technology to provide not only secure biometric and smart card credential identification and authentication, but monitoring and surveillance capabilities as well. In addition, Lenel's OnGuard Mobile Enterprise technology allows a sentry to have complete mobile access to electronic authentication and monitoring technology installed on base. OnGuard integrates all key electronic elements used in Force Protection Systems.

Sample System Users: Australian Army, MOD Norway, MOD Israel, Israeli Air Force, US Navy, US Army, UAE Air Force, US Marine Corps

Police Authorities

Police stations, offices and detention facilities are constantly being subjected to security threats. Criminal environments require absolute access control protection from physical damage and stolen credentials. Lenel OnGuard is the only product that offers an indestructible biometric verification method for minimizing the threat of secured area manipulation by prisoners. Wireless Digital Video can be monitored by officers on duty to allow them to quickly respond to any threat.

Sample System Users: New York Police Department (NYPD), Los Angeles Police Department (LAPD), Chicago Police Department, Philadelphia Police Department.

Municipal Utilities

Water and power utilities have long been viewed as "soft targets," vulnerable to even minor incursions causing major disruptions. Lenel's OnGuard platform offers security managers comprehensive, real-time monitoring and response capabilities, as well as complete investigative tools to track authorized and unauthorized activity on site.

Sample System Users: Sydney Water, Los Angeles Department of Water & Power, Kansas City Power & Light, Copenhagen Energy.

Ports and Harbors

Ports and harbors worldwide are becoming increasingly sensitive environments. Such areas are components of infrastructures that bring together people from all over the world. There are also a considerable number of assets that must be protected. This involves recording the vehicle and cargo identification numbers, as well as the identity of all transporting personnel. Maritime security also requires that video be made available to wireless patrol officers, who can react to alarms and plot a strategy to best respond to the situation. OnGuard assists officers in providing top security with asset tags, long range cards and readers.

Sample System Users: Port Authority of New York and New Jersey, Cascade General, Kvaerner Shipyard in Philadelphia, Cityport (Zürich), Jersey Harbor (U.K.), Port of New Orleans.

Municipal Buildings and Landmarks

Areas of public interest and public congregation can draw crowds for the wrong reasons. Environments of high traffic can create a distracting atmosphere where individuals with violent intentions can put people and property at risk. Security-conscious building managers have chosen the Lenel OnGuard solution to provide customized protection.

Sample System Users: City of Perth Council House in Western Australia, Supreme Court of Victoria, Washington DC Convention Center, Haifa Courthouse, National Gallery of Canada, Holocaust Museum in Washington DC.

US Federal Government

The US Federal Government requires a security system that is top-of-the-line in every respect. During the past few years, national security concerns have only increased. The Federal Government and its branches are a constant target for attack. Every one of Lenel's software offerings, including biometrics, smart cards and access control, is an essential tool in providing a total security knowledge management solution that is reliable, innovative and fully integrated. The US Federal Government cannot afford to settle for anything less than the best product available.

Sample System Users: Department of Transportation, Department of Agriculture, United States Postal Service, Space and Naval Warfare Systems, NASA, Department of Defense, Department of Homeland Security, Department of Energy, Naval Criminal Investigative Service, NIST Headquarters.

OnGuard MobileVerify™

OnGuard MobileVerify is a software application specifically designed for OnGuard Mobile Enterprise solutions. OnGuard MobileVerify provides the ability for an officer, guard or sentry to use an optional scanner or reader, and automatically search the database for access privileges. In an emergency, the officer can become a portal, and is instantly presented with the system's Access Granted or Access Denied response. This process can be performed in either a standalone or an online mode.

Lenel's Technology

Lenel has received security industry awards for technological innovation. Its comprehensive security platform uses industry standards to integrate a wide variety of technologies. Through this platform, security relationships are formed between cardholders, visitors, credentials, alarms and video, allowing for easy access to all incident and investigative information.

Lenel employs leading-edge biometric and smart card technologies to create multi-purpose credentials for logical and physical security access. This ability to centrally issue, manage and distribute credentials not only consolidates security gaps, but also provides cost savings to the customer.
