

SQL

IntelliTrack DMS with Microsoft SQL combines affordable barcode and RFID tracking software for mobile devices with a high-performance network database.

IntelliTrack DMS-SQL was designed for the enterprise that needs to track assets or inventory at many remote sites. IntelliTrack applications now have a new function to attach to the Microsoft SQL Server Desktop Engine (MSDE) and the Microsoft SQL network database. By employing SQL, IntelliTrack software now supports more users, provides superior local and wide-area network performance, centralizes database administration and allows users to maintain longer history and larger data tables.

IntelliTrack with SQL is able to maintain and synchronize large amounts of data while giving the local user access the central database and portable data.

NetSynch

IntelliTrack DMS with NetSynch manages data transfer for IntelliTrack applications across a wired or wireless network. The IntelliTrack application, data, and validation can be managed from the host to upload and download data to portable data terminals using TCP/IP. Any client Portable Data Terminal (PDT) with a wireless connection can send and receive IntelliTrack applications data and also update its application software to the most current application.

Data uploaded to the central host from single or multiple PDT's is automatically staged for data base updates, or reviewed by a manager for accuracy and then manually synchronized. The NetSynch host supports up to 25 simultaneous connections, allowing for data collection with a large number of devices.

The NetSynch host works with the full line of IntelliTrack DMS-SQL software packages, including Fixed Assets, Stockroom Inventory, Check In/Out, and Inventory Shipping Receiving and Picking (ISRP).

DMS Enterprise Mobility

DMS Enterprise Mobility Program Requirements

Server

- Processor
 - 1 GHz Minimum
 - 1.8 GHz recommended

RAM

- 256 MB Minimum
- 512 MB or greater recommended

Available Hard Disk

- 200 MB

Operating System

- Windows® 2000 SP4
- Windows® Server 2003

Client Workstation

Processor

- 800 MHz Minimum
- 1 GHz recommended

RAM

- 256 MB Minimum
- 512 MB or greater recommended

Available Hard Disk

- 300 MB

Operating System

- Windows® XP SP1
- Windows® 2000 SP4
